

## Mechanical Manufacturing Assembler

---

### Who We Are:

Greenlight Innovation ([www.greenlightinnovation.com](http://www.greenlightinnovation.com)) is a key contributor to the development of a clean energy future. Our customers use our specialized equipment to develop and build the next generation of fuel cell and battery electric vehicles and energy storage systems. We have the largest install base of electrochemical cell testing equipment in the world.

Our work environment will provide opportunities for career growth and independence in a fast-paced industry, and our roots as a process-based, lean operation will provide experience in a structured, process driven environment.

Our facility can be reached by Skytrain and bike lanes, and is located near the Burnaby Lake trail system.

### Job Description and Responsibilities:

We are seeking a Mechanical Assembler to join our team. In this role, you will be responsible for the mechanical assembly of customized equipment. The equipment is process-system related (pumps, heaters, valves, vessels, electrical components, mounted on frames), or automation equipment. We are a fast-paced company looking for someone who works hard, takes pride in their work, and is motivated by playing a role in the company's success. Occasional overtime is required.

### Responsibilities:

- Assembling and installing electro-mechanical components
- Assembling compression fittings, threaded fittings
- Building and repairing mechanical aspects of test stations
- Safely conducting leak and pressure tests, checking quality and checking build for errors
- Preparing equipment for shipment
- Other duties, as necessary

### Qualifications:

- Experience in a manufacturing environment
- Ability to read mechanical drawings and produce high quality output
- Experience in assembling mechanical components
- Strong verbal communication skills
- Excellent time management, prioritization skills, and attention to detail
- It would be an asset to have experience in some of the following:
  - Tubing and pipefitting skills with specific experience with compression fittings
  - Working with pressurized gases and fluids
  - Assembly of automation equipment
  - Electrical and electromechanical subassemblies or electrical panel building
